PopSim: towards a standardized database of population genetic simulations

The PopSim Consortium

February 1, 2019

Abstract

The explosion in population genomic data data demands ever increasingly complex modes of analysis. While the field has met this challenge to date, we have not yet created field-wide standards by which to measure the performance and accuracy of new tools. Here we describe a new resource, the PopSim database, that attempts to rectify this situation. This resource contains XXX...
